Preference to the Fifth Edition	xxi
Preface to the Fourth Edition	xxiii
Preface to the Third Edition	xxv
Preface to the Second Edition	xxvii
Preface to the First Edition	xxix
About the Author	xxxi
1. Fundamentals of Reservoir Fluid Behavior	1
Classification of Reservoirs and Reservoir Fluids	1
Pressure-Temperature Diagram	1
Oil Reservoirs	3
Gas Reservoirs	9
Undefined Petroleum Fractions	23
Problems	26
References	26
2. Reservoir-Fluid Properties	29
Properties of Natural Gases	29
Behavior of Ideal Gases	30
Apparent Molecular Weight	31
Standard Volume	32
Density	32
Specific Volume	33
Specific Gravity	33
Behavior of Real Gases	35
Case 1: Natural Gas Systems	40
Case 2: Gas-Condensate Systems	40
Effect of Nonhydrocarbon Components on the Z-factor	42
Nonhydrocarbon Adjustment Methods	43
The Wichert-Aziz Correction Method	43
The Carr-Kobayashi-Burrows Correction Method	45
Correction for High-Molecular Weight Gases	46

Direct Calculation of Compressibility Factors	50
The Hall-Yarborough Method	50
The Dranchuk-Abu-Kassem Method	52
The Dranchuk-Purvis-Robinson Method	54
Compressibility of Natural Gases	54
Gas Formation Volume Factor	59
Gas Viscosity	62
Methods of Calculating the Viscosity of Natural Gases	62
The Carr-Kobayashi-Burrows Correlation Method	62
The Lee-Gonzalez-Eakin Method	67
Properties of Crude Oil Systems	68
Crude Oil Gravity	68
Specific Gravity of the Solution Gas	69
Gas Solubility	70
Standing's Correlation	71
Oil Formation Volume Factor	84
Isothermal Compressibility Coefficient of Crude Oil " c_o "	89
Oil Formation Volume Factor for Undersaturated Oils	93
Crude Oil Density	96
Total Formation Volume Factor	97
Crude Oil Viscosity	103
Methods of Calculating Viscosity of the Dead Oil	104
Methods of Calculating the Saturated Oil Viscosity	105
Methods of Calculating the Viscosity of the Undersaturated Oil	107
Beal's Correlation:	107
The Vasquez-Beggs Correlation	107
Surface/Interfacial Tension	110
Properties of Reservoir Water	113
Water Formation Volume Factor	113
Water Viscosity	113
Gas Solubility in Water	114
Water Isothermal Compressibility	114
Problems	114
References	120
 3. Laboratory Analysis of Reservoir Fluids	 123
Composition of the Reservoir Fluid	123
Constant-Composition Expansion Tests	126
Differential Liberation (Vaporization) Test	133
Separator Tests	137
Adjustment of Differential Liberation Data to Separator Conditions	140
Extrapolation of Reservoir Fluid Data	143
Correcting Constant-Composition Expansion Data	145
Correcting Differential Liberation Data	147
Correcting Oil Viscosity Data	147
Correcting the Separator Tests Data	148
Laboratory Analysis of Gas Condensate Systems	151
Recombination of Separator Samples	151

Constant-Composition Test	153
Constant-Volume Depletion (CVD) Test	155
Problems	162
References	166
4. Fundamentals of rock properties	167
Routine core analysis tests	167
Special tests	167
Porosity	168
Absolute porosity	168
Effective porosity	168
Saturation	171
Average Saturation	173
Wettability	174
Surface and Interfacial Tension	175
Capillary Pressure	178
Capillary Pressure of Reservoir Rocks	181
Capillary Hysteresis	183
Initial Saturation Distribution in a Reservoir	186
Leverett J-Function	195
Converting Laboratory Capillary Pressure Data	197
Permeability	198
The Klinkenberg Effect	203
Averaging Absolute Permeabilities	209
Weighted-Average Permeability	209
Harmonic-Average Permeability	212
Geometric-Average Permeability	215
Absolute Permeability Correlations	216
The Timur Equation	217
The Morris-Biggs Equation	218
Rock Compressibility	220
Net pay thickness	225
Reservoir Heterogeneity	225
Vertical Heterogeneity	226
The Dykstra-Parsons Permeability Variation	227
Lorenz Coefficient L	231
Areal Heterogeneity	236
Reservoir Rock Characterization	242
Reservoir Petrophysical Empirical Correlations	249
Problems	276
References	280
5. Relative Permeability Concepts	283
Two-phase Relative Permeability	284
Wyllie and Gardner Correlation	289
Torcaso and Wyllie Correlation	290
Pirson's Correlation	290

Corey's Method	292
Relative Permeability from Capillary Pressure Data	294
Relative Permeability from Analytical Equations	296
Relative Permeability Ratio	303
Dynamic Pseudo-Relative Permeabilities	305
Normalization and Averaging Relative Permeability Data	307
Three-Phase Relative Permeability	313
Stone's Model I	316
Stone's Model II	318
The Hustad-Holt Correlation	318
Three-Phase Relative Permeability Hysteresis	320
Carlson Hysteresis Model	325
Problems	328
References	328
 6. Fundamentals of Reservoir Fluid Flow	 331
Types of Fluids	331
Incompressible Fluids	332
Slightly Compressible Fluids	332
Compressible Fluids	333
Flow Regimes	333
Steady-State Flow	334
Unsteady-State Flow	334
Pseudosteady-State Flow	335
Reservoir Geometry	335
Radial Flow	336
Linear Flow	336
Spherical and Hemispherical Flow	337
Number of Flowing Fluids in the Reservoir	338
Fluid Flow Equations	338
Darcy's Law	338
Steady-State Flow	340
Linear Flow of Incompressible Fluids	341
Linear Flow of Slightly Compressible Fluids	345
Linear Flow of Compressible Fluids (Gases)	346
Radial Flow of Incompressible Fluids	349
Solution	352
Radial Flow of Slightly Compressible Fluids	354
Radial Flow of Compressible Gases	355
Approximation of the Gas Flow Rate	360
Horizontal Multiple-Phase Flow	362
Unsteady-State Flow	364
Basic Transient Flow Equation	366
Total Accumulation of Mass	368
Radial Flow of Slightly Compressible Fluids	370
Constant-Terminal-Pressure Solution	373
Constant-Terminal-Rate Solution	374
The E_i -Function Solution	374

The Dimensionless Pressure Drop (p_D) Solution	381
Infinite-Acting Reservoir	383
Finite-Radial Reservoir	385
Radial Flow of Compressible Fluids	389
The $m(p)$ -Solution Method (Exact-Solution)	391
The Pressure-Squared Approximation Method (p^2 -method)	394
The Pressure-Approximation Method	396
Pseudosteady-State Flow	398
Radial Flow of Slightly Compressible Fluids	404
Radial Flow of Compressible Fluids (Gases)	411
Pressure-Squared Approximation Method	412
Pressure-Approximation Method	412
Skin Factor	413
Steady-State Radial Flow	416
Unsteady-State Radial Flow	416
Pseudosteady-State Flow	417
Turbulent Flow Factor	418
Unsteady-State Radial Flow	419
Semisteady-State Flow	420
Steady-State Flow	421
Principle of Superposition	422
Effects of Multiple Wells	423
Effects of Variable Flow Rates	426
Effects of the Reservoir Boundary	429
Accounting for Pressure-Change Effects	431
Transient Well Testing	432
Drawdown Test	433
Pressure Buildup Test	443
Problems	451
References	455
 7. Oil Well Performance	 457
Vertical Oil Well Performance	457
Productivity Index and IPR	457
Saturated Oil Reservoirs	464
Undersaturated Oil Reservoirs	466
Wiggins' Method	471
Standing's Method	473
Fetkovich's Method	476
The Klins-Clark Method	488
Sukarno and Wisnogroho IPR Method	491
Horizontal Oil Well Performance	498
Method I	500
Method II	500
Horizontal Well Productivity under Steady-State Flow	502
Borisov's Method	503
The Giger-Reiss-Jourdan Method	503
Joshi's Method	504

The Renard-Dupuy Method	504
Horizontal Well Productivity under Semisteady-State Flow	508
Retnanto and Economides Correlation	509
Al-Hussain and Hossain Correlation	510
Harrison's IPR Correlation	510
Cheng	511
Retnanto and Economides Correlation	512
Wiggins-Wang	512
Al-Hussain-Hossain	512
Harrison	512
Emara	512
Introduction to Nodal Analysis	515
NODE 1: The Inflow Performance	519
NODE 2: Outflow Tubing Performance	519
Inflow and Outflow Relationships	532
Problems	540
Reference	542

8. Gas Well Performance 545

Vertical Gas Well Performance	545
Region III. High-Pressure Region	548
Region II. Intermediate-Pressure Region	549
Region I. Low-Pressure Region	549
Pressure-Squared Approximation Form	552
Pressure-Approximation Form	553
Real Gas Potential (Pseudopressure) Form	553
The Simplified Treatment Approach	554
The Laminar-Inertial-Turbulent (LIT) Approach	555
The Back-Pressure Test	559
Future Inflow Performance Relationships	567
Back-Pressure Equation	567
LIT Methods	568
The Laminar-Inertial-Turbulent "LIT" Method	571
Horizontal Gas Well Performance	573
System Analysis	576
The Inflow and Outflow Performances	578
Approach 1: Constant Wellhead Pressure	582
Approach 2: Variable Wellhead Pressure	586
Surface Choke Performance	589
Critical Flow	590
Subcritical Flow	590
Gas Adjustable Choke	591
Gas Bean Choke	592
Flowline and Separator Performance Relationships	594
Concept of Liquid Loading	598
Problems	601
References	602

9. Gas and Water Coning	605
Coning	605
Coning in Vertical Wells	608
Vertical Well Critical Rate Correlations	608
The Meyer-Garder Correlation	609
The Chierici-Ciucci Approach	614
The Hoyland-Papatzacos-Skjaeveland Methods	624
Critical Rate Curves by Chaney et al.	628
Breakthrough Time in Vertical Wells	636
The Sobocinski-Cornelius Method	637
The Bournazel-Jeanson Method	638
After Breakthrough Performance	639
Coning in Horizontal Wells	646
Horizontal Well Critical Rate Correlations	647
Chaperson's Method	647
Efros' Method	649
Karcher's Method	650
Joshi's Method	651
Horizontal Well Breakthrough Time	652
The Ozkan-Raghavan Method	652
Papatzacos' Method	654
Problems	659
References	661
10. Water Influx	663
Classification of aquifers	663
Degree of Pressure Maintenance	664
Outer Boundary Conditions	665
Flow Regimes	666
Flow Geometries	666
Recognition of Natural Water Influx	667
Water Influx Models	667
The Pot Aquifer Model	668
Schilthuis' Steady-State Model	670
Hurst's Modified Steady-State Model	674
The Van Everdingen-Hurst Unsteady-State Model	677
Edge-Water Drive	678
The Carter-Tracy Water Influx Model	738
Fetkovich's Method	742
Problems	748
References	750
11. Oil Recovery Mechanisms and The Material Balance Equation	751
Primary Recovery Mechanisms	751
Rock and Liquid Expansion	752

The Depletion Drive Mechanism	752
Gas Cap Drive	755
The Water-Drive Mechanism	758
The Gravity-Drainage-Drive Mechanism	762
The Combination-Drive Mechanism	766
The Material Balance Equation	767
Basic Assumptions in the MBE	780
The MBE as an Equation of a Straight Line	784
The Straight-Line Solution Method to the MBE	786
Volumetric Undersaturated-Oil Reservoirs	786
Volumetric Saturated-Oil Reservoirs	791
Gas-Cap-Drive Reservoirs	800
Water-Drive Reservoirs	804
Combination-Drive Reservoirs	811
Average Reservoir Pressure	812
Tracy's Form of the Material Balance Equation	813
Problems	815
Reference	818
12. Predicting Oil Reservoir Performance	819
Reservoir Performance Prediction Methods	819
Instantaneous Gas-Oil Ratio	819
Undersaturated-Oil Reservoirs	831
Saturated-Oil Reservoirs	833
Tracy's Method	835
Muskat's Method	840
Turner's Method	844
Relating reservoir performance to time	849
Problems	852
References	853
13. Gas Reservoirs	855
The Volumetric Method	856
The Material Balance Method	858
Volumetric Gas Reservoirs	859
Form 1. In terms of p/z	860
Form 2. In terms of B_g	865
Water-Drive Gas Reservoirs	867
The Gas Material Balance Equation as a Straight Line	871
Abnormally Pressured Gas Reservoirs	876
Effect of Gas Production Rate on Ultimate Recovery	881
Tight Gas Reservoirs	881
Shallow Gas Reservoirs	893
Problems	898
References	900

14. Principles of Waterflooding	901
Factors to Consider in Waterflooding	901
Reservoir Geometry	902
Fluid Properties	903
Reservoir Depth	903
Lithology and Rock Properties	903
Fluid Saturations	904
Reservoir Uniformity and Pay Continuity	904
Primary Reservoir Driving Mechanisms	905
Optimum Time to Waterflood	907
Impact of Trapped Gas on Oil Recovery by Waterflood	908
The Concept of Variable-Bubblepoint Pressure	915
Water Flooding Patterns	918
Irregular Injection Patterns	919
Peripheral Injection Patterns	919
Regular Injection Patterns	920
Crestal and Basal Injection Patterns	921
Overall Recovery Efficiency	921
I. Displacement Efficiency	924
Effect of Water and Oil Viscosities	931
Effect of Dip Angle and Injection Rate	932
Data Preparation	959
Recovery Performance to Breakthrough	960
Recovery Performance After Breakthrough	961
II. Areal Sweep Efficiency	966
Areal Sweep Efficiency Before Breakthrough	971
Areal Sweep Efficiency at Breakthrough	972
Areal Sweep Efficiency After Breakthrough	972
Initial Calculations	986
Calculation of Recovery Performance to Breakthrough	987
Oil Recovery Calculations After Breakthrough	989
Constant Injection Pressure and Variable Injection Rate " i_w "	996
Constant Injection Rate and Variable Injection Pressure	997
Effect of Initial Gas Saturation	1000
Stage 1: Start–Interference	1001
Stage 2: Interference–Fill-Up	1006
Stage 3: Fill-up — Water Breakthrough	1008
Stage 4: Water Breakthrough–End of the Project	1010
Impact of Water Fingering and Tonguing	1017
III. Vertical Sweep Efficiency	1020
Reservoir Vertical Heterogeneity	1020
Minimum Number of Layers	1022
The Zonation Problem	1024
Calculation of Vertical Sweep Efficiency	1027
I. Stiles' Method	1028
II. The Dykstra–Parsons Method	1031
Methods of Predicting Recovery Performance for Layered Reservoirs	1034

Simplified Dykstra-Parsons Method	1035
Modified Dykstra-Parsons Method	1038
Craig-Geffen-Morse Method	1040
Waterflood Diagnostic Plots & Surveillance Methods	1044
Bubble Maps	1045
The Gas-Oil Ratio Plot:	1047
The Water-Oil Ratio Plot:	1047
The Hall <i>Plot</i>	1051
The X-Plot	1057
Voidage Replacement Ration and Production Curves Plot	1062
The ABC Plot	1064
Heterogeneity Index Map	1066
Pattern Balancing	1068
Tracers Survey:	1070
Volumetric Sweep Efficiency	1072
Confinement Factor	1074
Waterflood Decline Curve Analysis	1077
Traditional Decline Curve Analysis	1078
Yang's Decline Analysis Model	1079
The Volumetric Sweep Efficiency Approach	1085
Analysis of Oil and Water Production Data	1091
Water Injection Efficiency	1093
Problems	1098
Reference	1105
 15. Vapor-Liquid Phase Equilibria	 1109
Vapor Pressure	1109
Equilibrium Ratios	1112
Flash Calculations	1114
Equilibrium Ratios for Real Solutions	1118
Wilson's Correlation	1118
Standing's Correlation	1119
Convergence Pressure Method	1123
Hadden's Method	1124
Standing's Method	1126
Rzasa's Method	1126
Whitson and Torp Correlation	1128
Equilibrium Ratios for the Plus Fraction	1129
Campbell's Method	1129
Winn's Method	1129
Katz's Method	1131
Applications of the Equilibrium Ratio in Reservoir Engineering	1131
Dew-Point Pressure	1131
Bubble-Point Pressure	1133
Separator Calculations	1135
Density Calculations	1147
The Standing-Katz Method	1147
The Alani-Kennedy Method	1154

Equations of State	1157
The Van der Waals Equation of State	1158
Redlich-Kwong Equation of State	1164
Soave-Redlich-Kwong Equation of State and Its Modifications	1169
Modifications of the SRK EOS	1179
Peng-Robinson Equation of State and Its Modifications	1182
Applications of the Equation of State in Petroleum Engineering	1193
Determination of the Equilibrium Ratios	1193
Determination of the Dew-Point Pressure	1195
Determination of the Bubble-Point Pressure	1197
Three-Phase Equilibrium Calculations	1198
Vapor Pressure from Equation of State	1202
Splitting And Lumping Schemes of The Plus-fraction	1204
Splitting Schemes	1205
Katz's Method	1206
Lohrenz's Method	1209
Pedersen's Method	1210
Ahmed's Method	1211
Lumping Schemes	1213
Whitson's Lumping Scheme	1214
Problems	1218
References	1222
 16. Analysis of Decline and Type Curves	 1227
Decline-Curve Analysis	1227
Exponential Decline, $b = 0$	1232
Harmonic Decline, $b = 1$	1238
Hyperbolic Decline, $0 < b < 1$	1239
Type-Curve Analysis	1250
Fetkovich Type Curve	1260
Carter Type Curve	1274
Palacio-Blasingame Type Curve	1279
Mattar and Anderson's Flowing Material Balance	1287
Anash et al. Type Curves	1289
Decline-Curve Analysis for Fractured Wells	1297
Infinite-Conductivity Vertical Fractures	1298
Finite-Conductivity Vertical Fractures	1298
Uniform-Flux Fractures	1299
Problems	1308
References	1309
 17. Fractured Reservoirs	 1311
Naturally Fractured Reservoirs	1312
Behavior of Naturally Fractured Reservoirs	1317
Hydraulically Fractured Wells	1342
Reference	1386

18. Modern Decline Curve Analysis	1389
Traditional Arps' DCA method	1390
The Multisegment Decline Approach	1394
Boundary-Dominated "B" Approach	1396
The Modified Arps Approach	1413
The Stretched Exponential Production Decline "SEPD"	1422
The Logistic Growth Model Approach	1440
The Duong Approach	1444
The Power-Law Exponential Function	1449
The T-Model	1455
Problems	1459
References	1460
Further Reading	1461
 Appendix	 1463
Index	1475
